# | About us

1

P2PSYSTEM (<https://www.p2psystem.in>) is the penultimate company developing error-free, innovative, class-apart business process automation, business intelligence, decision support systems and software solutions for their clients.

2

We realize the criticality of information technology to business operations and recognize the potential a service, system or solution can have on operating efficiency.

3

We develop market-recognized products that are cost-effective, high in quality and low in risk, well-architected and functionally rich. Our services lie at the heart of your business.

# | Our Objectives

1

- ✓ Provide state of the art technology to fully support current and future business needs.
- ✓ Deliver fast & error free disposal of services.

2

- ✓ Centralize control on business logic.
- ✓ Offer effective security management and disaster recovery plans complying with the industry standards.

3

- ✓ Speed up the process.
- ✓ Help improve the employee productivity.

# Our Global Services

## **Database Management**

Database Management Services' providers for over a decade, we offer best-in-class services across industries. Our team of experts possesses in-depth understanding of both – open and closed source databases, and helps you implement best-suited solutions post a thorough evaluation of your organizational requirements and business goals.

## **Website Hosting**

P2PSYSTEM provides a scalable platform that manage all backend concerns, including the maintenance and repair of the servers. So basically, our web hosts are designed to make your life easier by saving you the hassle.

# Our Global Services

## Cloud Hosting

Cloud hosting uses distributed resources like remote servers and data centers to employ features like backup power generation to ensure they continue sending information after utility failure.

The cloud hosting principles overcome natural disasters and service outages and improve your security stance.

## Business Intelligence

Business intelligence (BI) software solutions can retrieve, analyze, transform and report on data in real-time to provide interactive access to your company's data. BI software enables users to glean crucial insights into their organization's key operating information.

# Our Global Services

## Digital Marketing

P2PSYSTEM is dedicated to attracting targeted audiences online that will spell the difference between a successfully thriving business – and a failed one. P2PSYSTEM has the resources to convert the online traffic into leads or sales.

## ERP Solutions

In order to tackle this within a growing company, P2PSYSTEM offers the integration or development of the environments like Enterprise Resource Planning (ERP) and Customer Relationship Management (CRM).
